Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

DESCRIPTION OF IMPACT

Impacted?	Impacted Media	Extent of Impact	How Determined
Yes	SOILS	60ft. x 8ft. x 0.5 ft	Area was measured with measuring wheel and tape measure at time of spill.

INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

A 3" Injection spool piping failed, spilling 3.1 bbls of produced water to land. injection well was isolated and hydrovac recovered 4 bbls of fluid. All fluids stayed on location and inside location berms. Impacted area was water washed with fresh water. A soil sample was collected within the length of the spill. A soil sample location map and preliminary analytical results are included as an attachment.

PROPOSED SAMPLING PLAN**Proposed Soil Sampling**
☒ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Preliminary soil samples were collected on May 7, 2019 from the impacted area. Two grab samples analyzed for SAR, EC and pH was collected at a depth of 0 to 6 inches below ground surface (ft-bgs). Results show elevated SAR and EC levels within the impacted area. A subsequent soil sample from the SS1 location analyzed for full Table 910-1 will be collected during the summer of 2021 to monitor natural attenuation. SAR and EC impacted soils will be treated in-situ by Natural Attenuation. After initial water wash seasonal precipitation events will be utilized.

OTHER INVESTIGATION INFORMATION

☐ Were impacts to adjacent property or offsite impacts identified?

☒ Were background samples collected as part of this site investigation?

Background samples were collected.

☐ Was investigation derived waste (IDW) generated as part of this investigation?

Volume of solid waste (cubic yards) Volume of liquid waste (barrels)

☐ Is further site investigation required?

REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No

SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

No soil is intended for removal. SAR and EC impacted soils will be treated in-situ by Natural Attenuation. After initial water wash seasonal precipitation events will be utilized. A subsequent soil sample from the SS1 location analyzed for full Table 910-1 will be collected during the summer of 2021 to monitor natural attenuation.

REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

SAR and EC impacted soils will be treated in-situ by Natural Attenuation. After initial water wash seasonal precipitation events will be utilized. A subsequent soil sample from the SS1 location analyzed for full Table 910-1 will be collected during the summer of 2021 to monitor natural attenuation.
