Hi Deb,

I had left you a voice mail regarding the Unresolved Field Inspection Reports. I researched these items and found that the field inspections had FIRR's submitted and passed. There are no outstanding corrective actions. Three of the inspections were related to spills and those were resolved under approved Form 19's. The open remediation project is waiting on vegetative growth which should be resolved this summer. The unresolved spill was discussed with Rob Young a few years back when it was brought to out attention. It is almost 20 years old and there are no records in our files other than the initial spill report found on the website. I was under the assumption he took care of it since I never heard back.

I am attaching your spreadsheet with a status column summarizing my findings. Not sure why there is a discrepancy with your databases.

Let me know if you have any questions or require additional information.

Regards,

Jim
