General Comment:

Compliance supervisor Steve Labowskie conducted site inspection on 7/10/23 that included equipment, flowline, stormwater and FLIR survey.

A critical corrective action for fire safety was observed, dry combustible vegetation blown in and built up near fire tube on separator needs to be resolved as soon as possible and no later than 48 hours from receipt of this inspection.

An off location flowline and domestic tap was observed, no domestic tap appears in COGIS database, operator is reporting "gas used" on monthly Form 7, confirm domestic tap and off location does not belong to other operator and register domestic tap and flowline via Form 44.
