Response: CA COMPLETED

Date of Completion: 09/20/2023

Operator Comment: An updated site diagram was submitted via Form 4 doc 403536269 on 9/20/2023. Caerus is also ordering a final as-built to be done, and that will be submitted once received. Per the updated construction layout plat, two 18" CMP culverts were installed, one at each entrance; The slope drains originally proposed were not installed and were removed from the drawing. Due to pipeline corridor construction, the diversion ditch and the sediment trap

for diversion water and south access were not installed; The estimated stormwater runoff volume for the 2-year 24-hour storm is 15,240 CF. The three storm water collection basins will provide a cumulative storage volume of approximately 35,923 CF; Additional mulch and shaping was also applied to the cut slopes.
