COMMENTS:

During the Form 17 performed on 1/14/2023 a production and bradenhead sample not collected during the initial form 17. We installed automated gauges on 1/21/2023. A Form 4 for bradenhead abatements was approved on 2/7/2023. Chevron performed multiple blow downs on this well. The first blow down on 1/25/23, began at 59 psi and blew down to 0 psi. Pressure built back to 22 psi at which time we performed another blowdown on the well which took it to 0 psi. Pressure then built back to 32 psi at which time we performed a third blowdown which resulted in the bradenhead pressure increasing to 70 psi. After that final blowdown the well naturally declined in pressure and fell down to 0 psi for multiple months illustrated below. A closeout form 17 was submitted on 9/19/23 with a starting pressure of 13 psi and blew down to 0 psi. A gas sample collected and will be submitted to the state once it is processed. This well is in compliance with Order 1-232, and we request it be returned to annual testing.
