COMMENTS:

TEP Rocky Mountain LLC (TEP) is respectfully reporting the results of recent diagnostic testing and that the bradenhead on the Mobil W-7-34 has been connected to the sales line at the wellhead (latch valve located at the wellhead) as part of a Pressure Management Plan. The diagnostic testing resulted from the bradenhead exceeding the calculated bradenhead threshold pressure on September 1, 2023. The Form 17 reporting the results of the recent bradenhead test is included in the "Related Forms" section. TEP monitored the bradenhead pressure after performing the bradenhead test and determined that the bradenhead pressure will build and sustain pressures at or slightly exceeding the calculated threshold pressure of 63 psi. On October 17, 2023, TEP connected the bradenhead to the sales line at the wellhead as part of a Pressure Management Plan for this well. The average sales line pressure for this well is 38 psi. The bradenhead was connected to the sales line at the wellhead with stainless steel tubing and a check valve. A typical diagram is attached which depicts the bradenhead connection.
