This well has been producing from the "D" Sand (4852-55') since January, 1960. Casing problems developed in this well from about 650-1950'. On 3-27-80, a service unit was moved to location. 3/4" rods were found to be parted at 3350' with the 2" tubing full of drilling mud. On 4-3-80 a 4-1/2" Baker mechanical set Model "N" cast iron bridge plug was run on 2" tubing, hydro-tested to 6000# while going into the hole. The BP was set at 4729' (above the "D" Sand). The 2" tubing was pulled and laid down. A dump bailer was run, with 1 sx of cement (approximately 10') dumped on top of the BP.
