### INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

A site investigation was conducted pursuant to COGCC Rule 911 at the CARPIO T6N-R64W-S26 L01 Tank Battery location.

### PROPOSED SAMPLING PLAN

#### Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Grab confirmation soil samples were collected from the produced water vessel(s) excavation, beneath the ground oil tank(s), and at the separator(s). Additionally, soil samples were collected at the points of material change and/or hammer unions, directional changes, as well as at the bell holes on either side of a waterway, where applicable. Soil samples were analyzed by a certified laboratory for TPH (total volatile [C6-C10] and extractable [C10-C36] hydrocarbons), organic compounds in soil per COGCC Table 915-1, and EC, SAR, pH, and boron. All samples collected were analyzed by a certified laboratory using approved COGCC laboratory analysis methods.

#### Proposed Groundwater Sampling

☒ Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

Groundwater was encountered during the site investigation a grab groundwater was collected and analyzed for all organic compounds per COGCC Table 915-1.

#### Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

### Additional Investigative Actions

☐ Additional alternative investigative actions described in attached Site Investigation Plan ( summary ):

A Site Assessment was conducted to delineate impacted media at the facility. A total of five soil borings were advanced in the area of impacts. Soil samples were collected and analyzed for TPH (total volatile [C6-C10] and extractable [C10-C36] hydrocarbons), organic compounds in soil per COGCC Table 915-1, metals in soil per COGCC Table 915-1, and pH, EC, SAR, and boron. Each of the five soil borings were converted to temporary groundwater monitoring wells. Five groundwater samples were collected and analyzed for BTEX, naphthalene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, and inorganic parameters.

#### SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

A site assessment was conducted between June 16, 2022 and September 21, 2022 to delineate impacted media. A total of ten soil borings (BH01-BH10) were advanced to delineate the groundwater impacts identified during facility decommissioning at sample location GW01@3.5'. Soil samples were collected and submitted for full ECMC table 915-1 analyses. Additionally, two soil borings (BH11 and BH12) were advanced to delineate EC impacts identified in soil boring BH10. Concurrently with the site assessment activities, a total of 20 background soil samples were collected from 10 discrete locations (BG01-BG10) and were analyzed for EC and metals in soil per ECMC Table 915-1.

Based on the full delineation of EC impacts above background levels, a detailed reclamation plan will be generated for the site and submitted on a subsequent form 27. Additionally, a detailed analysis of background metals concentrations when compared to delineation concentrations will be submitted on a subsequent Form 27.

Based on the four consecutive quarters of groundwater monitoring results, as demonstrated in the attached Third Quarter 2023 Site Monitoring Report, Noble requests to discontinue quarterly groundwater monitoring at the site.

#### REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.
