**OPERATOR COMMENT AND SUBMITTAL**

Comment: This FIRR advises that Operator took immediate corrective actions to close the thief hatch on top of tank and to install a Jayco "Stack Vent" pressure relief valve on riser from tank.  
This FIRR also informs that Operator is seeking a variance to bradenhead testing on the Hassler 27 well, a turn of the century completion, with wellbore construction consisting of casing strings clamped or welded on without bradenhead access. Operator is concerned about hot-tapping an access into the casing and potentially damaging the casing which would in turn compromise the well integrity. At this time, there is no measurable pressure or observation of fugitive gas from the well, indicating the casing is securely isolating hydrocarbon migration.

I hereby certify that the statements made in this form are, to the best of my knowledge, true, correct, and complete.
