## Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by ECMC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

**INITIAL ACTION SUMMARY**

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

In accordance with Rule 911.a, Scout is submitting this Form 27 to close the orphan well pad. Historically in this area Scout has occasionally encountered what appears to be historical drill cuttings remaining adjacent to the wells. This Form 27 workplan is being submitted to address the cuttings if encountered. Scout collected five (5) soil samples from locations most likely to have been impacted at the orphan well pad as described in the attached Site Investigation Report dated January 29, 2024. All sample analytical results are below ECMC Table 915-1 RSSL cleanup concentrations and modified background soil concentrations. Initial Form 27 (doc #403045679) included an approved reduced analyte suite for the decommissioning samples.

**PROPOSED SAMPLING PLAN****Proposed Soil Sampling**

☒ Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Please see Appendix A of attached Site Investigation Report dated January 29, 2024. In June 2022, Scout acquired the Whiting assets in this area and took ownership of the orphan locations formerly owned and maintained by Whiting. As part of the transfer of operatorship process, Scout took ownership of the background soil sampling reports and analytical data from Whiting. Scout intends to apply the analytical data from the background soil sampling efforts to the orphan location closures to determine whether contaminants of concerns identified through future soil sampling are naturally occurring in the area, or are due to potentially historic impacts at the orphan locations.

**Proposed Groundwater Sampling**

☐ Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

**Proposed Surface Water Sampling**

☐ Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

**Additional Investigative Actions**

☐ Additional alternative investigative actions described in attached Site Investigation Plan ( summary ):

## SITE INVESTIGATION REPORT

## **SAMPLE SUMMARY**

### **Soil**

Number of soil samples collected 5

Number of soil samples exceeding 915-1 4

Was the areal and vertical extent of soil contamination delineated? Yes

Approximate areal extent (square feet) 0

### **Groundwater**

Number of groundwater samples collected 0

Was extent of groundwater contaminated delineated? No

Depth to groundwater (below ground surface, in feet)

Number of groundwater monitoring wells installed

Number of groundwater samples exceeding 915-1

### **Surface Water**

0 Number of surface water samples collected

Number of surface water samples exceeding 915-1

If surface water is impacted, other agency notification may be required.

### **NA / ND**

-- Highest concentration of TPH (mg/kg) 54.48  
69

-- Highest concentration of SAR 9.75

BTEX > 915-1 No

Vertical Extent > 915-1 (in feet) 0

Highest concentration of Benzene (µg/l)

Highest concentration of Toluene (µg/l)

Highest concentration of Ethylbenzene (µg/l)

Highest concentration of Xylene (µg/l)

Highest concentration of Methane (mg/l)

## **OTHER INVESTIGATION INFORMATION**

☐ Were impacts to adjacent property or offsite impacts identified?

☒ Were background samples collected as part of this site investigation?

Multiple discrete background grab samples were collected throughout the field to determine the naturally occurring background concentrations of EC, SAR, pH, and Arsenic. The resulting lab data indicated that EC ranged from 0.178 to 10.4 mmhos/cm, SAR was < 6, pH ranged from 7.71 to 9.04, and Arsenic ranged from 4.16 to 8.08 mg/kg. These ranges along with Table 915-1 were utilized to evaluate the onsite samples. Please see Appendix A of the attached Site Investigation Report dated January 29, 2024 for additional details on the background samples.

☐ Was investigation derived waste (IDW) generated as part of this investigation?

Volume of solid waste (cubic yards)

Volume of liquid waste (barrels)

☐ Is further site investigation required?

## **REMEDIAL ACTION PLAN**

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No

## **SOURCE REMOVAL SUMMARY**

Describe how source is to be removed.

If encountered the cuttings will be removed via a combination of mechanical and hand excavation in an effort to minimize disturbing the surrounding vegetation. The removed cuttings will be staged onsite.

## **REMEDICATION SUMMARY**

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

If encountered the cuttings (or any impacted material) will be staged and shredded onsite adjacent to the wells. The cuttings will then be processed through a soil shredder with a combination of soil and/or amendments at a ratio necessary to achieve Modified Table 915-1 Cleanup Concentrations.

Do all soils meet Table 915-1 standards? Yes

Does the previous reply indicate consideration of background concentrations? Yes

Does Groundwater meet Table 915-1 standards? Yes

Is additional groundwater monitoring to be conducted? \_\_\_\_\_

Operator shall comply with the ECMC 1000-Series Reclamation Requirements for all impacted and disturbed areas.

## RECLAMATION PLAN

### RECLAMATION PLANNING

Describe reclamation plan. Discuss existing and new grade recontouring; method and testing of compaction alleviation; and reseeding program, including location of new seed, seed mix and noxious weed prevention. Attach diagram or drawing.

The location will be reclaimed to the present grade of the location or to the approximate original contour of the landscape and consistent with the 1000-series Rule. Seeding of the disturbed area will be performed in accordance with its intended use. The seed mix will be prescribed by the landowner. There are no known noxious weeds in the immediate area of the disturbance.

Is the described reclamation complete? \_\_\_\_\_

Does the reclamation described herein constitute interim or final reclamation of the Oil and Gas Location?

## **OPERATOR COMMENT**

Additional information regarding this site assessment can be found in the attached Site Investigation Report dated January 29, 2024.

Five (5) soil samples were collected from the former wellhead, area of concern, and tailings piles at AC McLaughlin 77 on 11/1/2022 and 8/1/2023 and analyzed for ECMC Table 915-1 contaminants of concern. The locations of the former wellhead, area of concern, and tailings pile are shown on Figure 2.

Excluding SAR, the sample analytical results did not exceed the ECMC Table 915-1 Residential Soil Screening Levels (RSSLs) and background levels in the first assessment performed on 11/1/2022. Results from the discrete soil sample collected from the tailings pile exhibited SAR exceedances greater than ECMC Table 915-1 RSSLs and background levels. To address this exceedance, Scout processed the tailings piles through a soil shredder with a combination of soil and/or amendments at a ratio necessary to achieve ECMC Table 915-1 Cleanup Concentrations. A second discrete soil sample from the tailings pile was collected on 8/1/2023. SAR was detected at concentrations below the ECMC Table 915-1 cleanup concentrations in this second sample.

Site soil conditions and soil sample laboratory analytical results are provided in Table 1 and Table 2. Based on the results of the assessment of the soil conditions at the AOC, wellhead, and tailings pile, the location does not demonstrate any exceedances for ECMC Table 915-1. Therefore, Scout requests approval for No Further Action (NFA) associated with the AC McLaughlin 77 location.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.

### **COA Type**

### **Description**

	Based on a review of the information provided, it appears that no further action is necessary at this time and ECMC approves the closure request. Should conditions at the site indicate contaminant concentrations in soils exceeding ECMC standards, or, if groundwater is found to be significantly impacted, further investigation and/or remediation activities may be required at the site.
