COMMENTS:

TEP Rocky Mountain LLC (TEP) is reporting the results of recent diagnostic testing and requesting ECMC approval to connect the Exxon Mobil GM 343-27 bradenhead to the sales line. The diagnostic testing resulted from the bradenhead exceeding the calculated bradenhead threshold pressure on February 23, 2024. The Form 17 reporting the results of the recent bradenhead test is included in the "Related Forms" section. TEP has monitored the bradenhead pressure since performing the bradenhead test and determined that the bradenhead pressure will build and sustain pressures exceeding the current ECMC calculated threshold pressure of 216 psi.

TEP is requesting ECMC approval to connect the Exxon Mobil GM 343-27 to the sales line to satisfy the ECMC required Bradenhead Pressure Management Plan for this well. The average sales line pressure for this well is 90 psi and the bradenhead connection to the sales line will effectively manage the bradenhead pressure below the ECMC threshold pressure of 216 psi. TEP will complete the bradenhead connection to the sales line downstream of the latch valve and the bradenhead will be continuously equalized with the sales line pressure.
