**General Comment:**

Release discovered by inspector on Brown 22-32 well location while completing Follow-Up Inspections on wells in the area. The Brown Well sets just off the access two track and damp/muddy soil approximately 23' X 25' was noted emanating from the wellhead to the edge of access road. At the time of discovery no actual leak at wellhead was noted. Suspect the fluids are leaking around the packing when the Pump Jack is in operation. Pumping unit is not on continuous operation and is run by timer and the Pump Jack did not come on while inspector was on site for verification of packing leak. The Operator was notified of discovery 4/11/2024 2:30PM.
