General Comment:

This is an Interim Reclamation and Stormwater inspection. This was a joint inspection with Environmental and Reclamation units. There will be a separate Environmental inspection submitted.

On May 2, 2024, Reclamation Staff, Chris Binschus, had a conference call with the Operator, Annalee Penner and Wes Corliss, regarding Fulcrum locations inspected the week of April 15th, 2024.

The Compliance Unit submitted a Field Inspection Report from a May 1, 2024 inspection. Operator shall comply with all corrective actions from previous inspections.

1002c. PROTECTION OF SOILS _____ Fail _____

Comment

This location does not comply with Reclamation Rule 1002.c. Rule states all stockpiled soils shall be protected from wind and water erosion during production operations.

There is evidence of erosion along the entire fill slope of the topsoil stockpile due to vertical slopes. On May 2nd, Staff discussed the need to reduce the vertical fill slope or the need for additional BMPs if the fill slopes will remain vertical. Staff recommends reducing the vertical fill slope to prevent on-going erosion and to allow the Operator to better manage the stockpile when trying to establish long-term stabilization through vegetative growth. Refer to Photos 2-3.

Operator has seeded the topsoil stockpile but did not appear to seed the fill slope.

Corrective Action

Comply with Rule 1002.c. to implement long-term BMP stabilization of the topsoil stockpile.

On May 2nd, Staff discussed leaving Corrective Action dates blank given the timing stipulations and allowing the Operator to determine when the best time would be to complete the work.

Comment:

This location does not comply with Reclamation Rule 1002.f. Rule states Operator shall implement BMPs in accordance with good engineering practices and maintain BMPs until the facility is abandoned and final reclamation is achieved pursuant to Rule 1004. Also, Operators shall employ BMPs for soil stockpiles (i.e., topsoil stockpile).

The perimeter silt fence BMP was in disrepair and has not been maintained. The perimeter BMP does not appear to be an appropriate BMP given the snow accumulation in the winter months, which will continue to cause failures. Refer to Photos 2-3.

On May 2nd, Staff discussed the need for more than one BMP in situations like this.

Corrective Action:

Comply with Rule 1002.f. to implement BMPs in accordance with good engineering practices based on site-specific conditions and maintain BMPs until the facility is abandoned and final reclamation is achieved pursuant to Rule 1004.

Since there appeared to be erosion discharging off location, Operator may need to implement temporary BMPs until permanent BMPs can be installed.

Date: 05/31/2024

Pits:

☐ NO SURFACE INDICATION OF PIT
