COMMENTS:

A Form 4 bradenhead mitigation plan to install a surface kit on this well was approved on 1/10/2022, and the surface kit was installed on 5/22/2022. Continued use of surface kit and return to annual testing was approved on 7/14/2023. In order to allow kit to operate Chevron performed a fluid pull on 12/22/2023 to remove bits of rubber from the surface casing. The fluid pull had a starting surface casing pressure of 150 psi, and when the bradenhead was opened 4 gallons in 1 minute flowed for a calculated initial flow rate of 4.0 gallons/minute. During the fluid pull we collected 225 gallons of fluid from the bradenhead. A water sample was collected, and those results will be submitted once the lab has finished their analysis. On 5/3/2024 a Form 17 was completed with a starting pressure of 14 psi and an ending pressure 0 psi. The kit was shut in 167 hours and 15 minutes prior to the Form 17 being performed. Gas was present at the start of the test but was not continuous. The surface kit will remain on location for the next 12 months and continue to be used as a mitigation strategy to maintain bradenhead pressures below the 50-psi threshold. Chevron will perform another Form 17 test on or by 5/3/2025 and a follow up Form-4 will be submitted to the ECMC.
