A desktop review was conducted in regards to a historical pit located in close proximity to the Lilli Unit 3-15 plugged and abandoned wellhead. Historical pit assessment activities completed November 2022 per approved workplan (doc. # 402986366).

**PROPOSED SAMPLING PLAN****Proposed Soil Sampling**

☒ Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

One grab soil sample was collected at the highest PID field screening location in the soil bore and analyzed by a certified laboratory for TPH C6-36, organics, pH, EC, and SAR.

Additional assessment activities will be completed to laterally and vertically define soil concentrations at the site. Soil samples will be submitted for full ECMC Table 915-1 analysis (TPH, organics, inorganics, and metals).

All samples collected were/will be analyzed by a certified laboratory using approved ECMC laboratory analysis methods.

**Proposed Groundwater Sampling**

☒ Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

If groundwater is encountered the soil bores will be converted to a monitoring well. A groundwater sample will be collected for analysis by a certified laboratory for BTEX, naphthalene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, and inorganic groundwater parameters.

Per conversations with ECMC, a historical release was not reported following the initial historical pit assessment completed November 2022 (correspondance attached). Delineation activities will be completed to laterally and vertically define residual concentrations exceeding ECMC Table 915-1 Protection of Groundwater Soil Screening Levels (GSSLs). Soil samples will be collected for full ECMC Table 915-1 analysis (TPH, organics, inorganics, and metals).

## REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No

## SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

The investigative sample collected at the Lilli Unit 3-15 historical pit location contained Table 915-1 impacts above Protection of Groundwater Soil Screening Levels for 1-methylnaphthalene at 0.0374 mg/kg, 2-methylnaphthalene at 0.067 mg/kg, benzo(a)anthracene 0.629 mg/kg, benzo(a)pyrene at 0.44 mg/kg, benzo(b)fluoranthene at 0.419 mg/kg, and dibenz(a,h)anthracene at 0.096 mg/kg.

Per the approved form 27, the soil boring was advanced to refusal when at approximately 9.5' bgs a well-consolidated claystone was encountered. Hydrocarbon staining and odor were not observed and the sample was collected from the interval with the highest PID reading (5-7.5' = PID of 5.8 ppm-v). Groundwater was not encountered.

Per conversations with ECMC, a historical release was not reported following the initial historical pit assessment completed November 2022 (correspondance attached).

Delineation activities will be completed to laterally and vertically define residual concentrations exceeding ECMC Table 915-1 Protection of Groundwater Soil Screening Levels (GSSLs). Soil samples will be collected for full ECMC Table 915-1 analysis (TPH, organics, inorganics, and metals).

## REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Once residual GSSLs at the site are laterally and vertically defined, Noble proposes to close this location based on Residential Screening Levels due to the absence of groundwater and the presence of a confining layer below the observed impacts. Delineation activities are tentatively scheduled for July 2024, but will not be completed prior to ECMC review/approval of this workplan.
