RE: Location Data – No. 1 Reed (API 05-023-05002)

This well is located an area of the State that has not been surveyed using the Public Land Survey System (PLSS). The file information indicates that the well was located based on measurements from section lines in the so called "Costilla Estates Survey." No latitude / longitude coordinates were provided in the file.

Therefore, the latitude / longitude and UTM coordinate values in the COGCC database are estimated locations based on a digital version of the Costilla Estates Survey. They have been entered into the database for use in the COGCC Geographic Information System (GIS). This location should be considered a general location. Further research would be required to precisely locate this well location on the ground.
