**RE: Facility Closure Assessment
Wilson Creek Unit 2
CECMC Remediation Project Number 29726
Rio Blanco County, Colorado**

Ms. Puechner,

Entrada Consulting Group, Inc. (Entrada) has prepared this Closure Summary for Chevron USA Inc. (Chevron) related to the facility closure activities conducted at the Wilson Creek Unit 2 production pad (Site) located on privately owned surface in Rio Blanco County, Colorado. The Site is in the southeast quarter of the southwest quarter in Section 27, Township 3 north, Range 94 west, of the 6th Principal Meridian. The coordinates in decimal degrees of the approximate center point of the Site are 40.196671° latitude and -107.928269° longitude. The Colorado Energy & Carbon Management Commission (CECMC) Location ID for the Site is 314282.

Entrada was contracted to conduct field screening and collect soil samples during facility closure activities at the Site in accordance with the sampling plan submitted in the approved Form 27 Initial (Document Number 403350611). In a previous supplemental Form 27 (Document Number 403947363), a request for a reduced analyte suite of pH only was submitted on October 5, 2024. All investigation activities, field screening, and sampling activities discussed herein were conducted in accordance with CECMC 900 Series Rules and associated CECMC operator guidance documents.

SITE DESCRIPTION AND PATHWAY TO GROUNDWATER EVALUATION

The Site is located on a southeast facing hillside composed of Owen Creek-Jerry-Burnette loams and is situated at an elevation of approximately 7,952 feet above mean sea level (ft-amsl). The nearest surface water feature Wilson Creek is located approximately 0.55 miles northeast of the Site at an elevation of approximately 7,677 ft-amsl (275 feet below the Site). There are numerous groundwater wells within 1.00 mile of the Site actively permitted with the Colorado Division of Water Resources (DWR). The majority of those monitoring wells are located in the valley base in and around the Wilson Creek Central Production Area and area associated with CECMC Remediation Project Number 70.

A selection of representative monitoring wells that list construction data and static depths to water at the time of well construction are summarized in the table below.

DWR Permit Number	Date Installed	Approximate Surface Elevation (ft-amsl)	Static Depth to Ground water (ft-bgs)	Approximate Groundwater Elevation (ft-amsl)	Elevation Difference Between Unit 2 Ground Surface* and Reported Static Groundwater (feet)
260314	11/17/2004	6750.00	60.00	6690.00	1262.00
40187 MW26	11/01/2001	7706.08	6.68	7699.40	252.60
40187 MW29	10/30/2001	7698.31	18.49	7679.82	272.18

* Elevation information recorded using Google Earth

The information presented above indicates that a pathway to groundwater is not expected at the Site and that CECMC Table 915-1 Residential Soil Screening Levels (RSSLs) should be used.

FIELD SCREENING AND SOIL SAMPLING ACTIVITIES

Hydrocarbon impacts, in the form of stained soil and moderate to strong odors, were observed by Chevron personnel during well cut and cap operations and prior to initial soil screening of the wellhead bell hole. Excavation of stained soil commenced without initial screening conducted as impacts were evident. On September 11, 2024, and October 17, 2024, an Entrada representative was onsite to field screen and collect soil samples from the main wellhead excavation, additional local backgrounds and collect resamples from west wall of the main wellhead excavation respectively. In total, soil was field screened at eleven (11) locations from different depths throughout the investigation: nine points from the wellhead excavation sidewalls and two points from the wellhead excavation base. Groundwater was not observed at any point during field activities. Soil from each of these locations was visually examined for evidence of potential environmental impacts (e.g., petroleum staining and odor) and screened for volatile organic compounds. Screening was conducted by placing the soil into a re-sealable bag, allowing the soil to warm and volatilize any organic compounds, and monitoring the headspace in the bag with a photoionization detector (PID) equipped with a 10.6 eV lamp. The maximum PID reading observed during the investigation was 3.2 parts per million (ppm) at Unit 2 WH NBASE (21') field screening location at the base of the wellhead excavation.

Wellhead Excavation and Sampling

During the September 11, 2024, excavation sampling event, analytical results from the excavation west wall Unit 2 WH WW (15') was below the CECMC Table 915-1 standard for pH and not within local background concentrations.

A minimal volume of additional impacted soil was excavated from the west wall of the excavation, and on October 17, 2024, a confirmation sample, Unit 2 WH WW03 (15'), was collected at a depth of 15 ft-bgs. Analytical results indicated that the low pH soil had been adequately removed.

In total, seven (7) soil samples were collected from the wellhead excavation at depths ranging from 9 to 21 ft-bgs and submitted for laboratory analysis. Two (2) soil samples, Unit 2 WH NBASE (21') and Unit 2 WH SBASE (20') were collected from the excavation base. Five (5) soil samples, Unit 2 WH EW (15'), Unit 2 WH NW (14'), Unit 2 WH WW (15'), resample Unit 2 WH WW03 (15') and Unit 2 WH SW (14') were collected from the excavation sidewalls. All impacts were fully delineated and removed from the excavation. A summary of the analytical results is included as **Table 1** and a sample location figure is included as **Figure 1**.

A regional background sample, WC BG-SP12 was collected from similar soil type (Owen-Creek-Jerry-Burnette-Loams) as the Site at depths ranging from 0 to 2 ft-bgs. These samples were collected from undisturbed native material away from potential impacts related to Site activities to characterize background conditions as part of the broader Wilson Creek Background soil survey. On September 11, 2024, an additional four (4) local background samples were collected and analyzed for Table 915-1 metals and soil suitability for reclamation standards from one (1) location adjacent to the Site (Unit 2 BG1) at depths ranging from 5 to 13 ft-bgs. A summary of the local background analytical results is included in **Table 2**. A summary of the broader background data including analytical results, and a sample location figure is included as an **Attachment**.

A photographic log and wellhead and flowline checklists documenting Site conditions during the field assessment are provided as **Attachments**.

SOIL ANALYSIS

All soil samples were collected in sample containers appropriate for the specified laboratory analyses, sealed, labeled, and placed into an ice filled cooler for preservation. Six (6) total soil samples collected were submitted to Pace Analytical in Mt. Juliet, Tennessee following chain-of-custody procedures and were analyzed for the following:

- Total petroleum hydrocarbons as diesel range organics (TPH-DRO) and TPH as oil range organics (ORO) by U.S. Environmental Protection Agency (EPA) Method 8015M;
- TPH as gasoline range organics (GRO) by EPA Method 8015D;
- Benzene, toluene, ethylbenzene and xylenes (BTEX) by EPA Method 8260B;
- Polycyclic aromatic hydrocarbons (CECMC Table 915-1 list) by EPA Method 8270C;
- pH by EPA Method 9045D;
- Metals:
 - Arsenic by EPA Method 6020;
 - Barium, cadmium, copper, lead, nickel, selenium, silver, and zinc by EPA Method 6010B;
 - Hexavalent chromium by EPA Method 7199; and
 - Hot water-soluble boron by 6010B-NE493 Ch 2;
- Electrical conductivity (EC) by EPA Method 9050A Modified; and
- Sodium adsorption ratio (SAR) by calculation.

One (1) soil sample was submitted to Pace Analytical in Mt. Juliet, Tennessee following chain-of-custody procedures and were analyzed for the following:

- pH by EPA Method 9045D

Four (4) local background soil samples were submitted to Pace Analytical in Mt. Juliet, Tennessee following chain-of-custody procedures and were analyzed for the following:

- pH by EPA Method 9045D;
- Metals:
 - Arsenic by EPA Method 6020;
 - Barium, cadmium, copper, lead, nickel, selenium, silver, and zinc by EPA Method 6010B;
 - Hexavalent chromium by EPA Method 7199; and
 - Hot water-soluble boron by 6010B-NE493 Ch 2;
- Electrical conductivity (EC) by EPA Method 9050A Modified; and
- Sodium adsorption ratio (SAR) by calculation

The background samples collected as part of the broader Wilson Creek Background soil survey were analyzed for the metals listed above, EC, pH, hot water-soluble boron and SAR by the previously listed analytical methods.

SOIL ANALYTICAL RESULTS

Based on the pathway to groundwater evaluation discussed above, the CECMC Table 915-1 Residential Soil Screening Levels (RSSLs) were used to determine soil compliance. The following laboratory analytical results were reported above the applicable CECMC Table 915-1 RSSLs in the final excavation.

- Arsenic was reported above the Table 915-1 RSSL of 0.68 milligrams per kilogram (mg/kg) in final excavation samples at levels ranging from 1.67 mg/kg in Unit 2 WH NW (14') to 5.35 mg/kg in Unit 2 WH SBASE (20'). All soil sample results for arsenic were within 1.25X maximum background concentration for the Owen-Creek-Jerry-Burnette-Loams of 4.61 mg/kg in sample WC BG-SP12 (12-24"). Consideration of Table 915-1 footnote 11 is requested for all arsenic samples.
- Hexavalent chromium sample results were below the laboratory practical quantitation limit (PQL) of 1.0 mg/kg in all samples. Consideration of Table 915-1 footnote 9 is requested for hexavalent chromium samples.

All remaining confirmation sample results were compliant with the applicable Table 915-1 RSSLs and Soil Suitability for Reclamation Standards. The soil analytical results are summarized in **Table 1**. The laboratory analytical reports are included as an **Attachment**.

DISCUSSION AND CONCLUSIONS

A database search revealed that the depth to groundwater in this area is likely in excess of 100 ft-bgs. Based on this, Entrada asserts that there is no clear path to groundwater on this Site and that Residential Soil Screening Levels should be used.

Based upon field screening and soil sampling activities completed at the Site, and laboratory analytical data presented herein, Entrada recommends that Chevron:

- Field screen and collect a soil sample from the end of the former on-location flowline where it exited the location in order to address the sample data gap.
- Request approval to begin backfilling the excavation from the CECMC.

The soil stockpiles designated for beneficial reuse associated with the Upper CRA Project (REM# 70) will be utilized for excavation backfill and reclamation activities. Specifically, it is Chevron's intent to use soil from stockpiles C-11 and C-18. If additional soil is required, Chevron will then move to piles C-22, C-23, C-25 and C-27 until the excavation is completely backfilled. Approval to use the soil for beneficial reuse within the Wilson Creek Field was approved by the CECMC under document numbers 403790796 and 403860638. Approximately 2,500 cubic yards of impacted soil were removed during Site remediation. It is anticipated that approximately 2,500 cubic yards of beneficial reuse soil from the stockpiles noted above will be utilized for backfill and reclamation activities. An analytical summary including laboratory reports is included as an **Attachment**.

We appreciate the opportunity to assist Chevron USA Inc. Please contact me at (970) 270-2986 if you have any questions.

Sincerely,

ENTRADA CONSULTING GROUP, INC

Tim Dobransky

Notes:

mg/kg - milligrams per kilogram

meq/100g - milliequivalents per 100 grams

su - standard units

NT - parameter was not tested

B - analyte detected in the associated Method Blank above the Reporting Limit

J - the identification of the analyte is acceptable; the reported value is an estimate.

D - Reporting Limit (RL) increased due to sample matrix

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.	¹ Cp
ND	Not detected at the Reporting Limit (or MDL where applicable).	² Tc
RDL	Reported Detection Limit.	³ Ss
Rec.	Recovery.	⁴ Cn
RPD	Relative Percent Difference.	⁵ Sr
SDG	Sample Delivery Group.	⁶ Qc
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.	⁷ Gl
U	Not detected at the Reporting Limit (or MDL where applicable).	⁸ Al
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.	⁹ Sc
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.	
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.	
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.	
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.	
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.	
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.	
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.	
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.	
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.	
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.	
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.	

Qualifier	Description
J	The identification of the analyte is acceptable; the reported value is an estimate.
J3	The associated batch QC was outside the established quality control range for precision.
T8	Sample(s) received past/too close to holding time expiration.
V	The sample concentration is too high to evaluate accurate spike recoveries.

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Stantec Consulting Services**Chris Roy****2000 S. Colorado Blvd. Suite 2-300****Denver****CO 80222****Project Name - UCRA Remedial Excavation****Project Number - [none]**

Attached are your analytical results for UCRA Remedial Excavation received by Origins Laboratory, Inc. July 29, 2024. This project is associated with Origins project number Y407752-01.

The analytical results in the following report were analyzed under the guidelines of EPA Methods. These methods are identified as follows; "SW" are defined in SW-846, "EPA" are defined in 40CFR part 136 and "SM" are defined in the most current revision of Standard Methods For the Examination of Water and Wastewater.

The analytical results apply specifically to the samples and analyses specified per the attached Chain of Custody. As such, this report shall not be reproduced except in full, without the written approval of Origin's laboratory.

Unless otherwise noted, the analytical results for all soil samples are reported on a wet weight basis. All analytical analyses were performed under NELAP guidelines unless noted by a data qualifier.

Any holding time exceedances, deviations from the method specifications or deviations from Origins Laboratory's Standard Operating Procedures are outlined in the case narrative.

Thank you for selecting Origins for your analytical needs. Please contact us with any questions concerning this report, or if we can help with anything at all.

Chain of Custody Modification Request

On 8/9/2024, Chris Roy from Stantec contacted Jennifer Pellegrini via email regarding Y407752 requesting that pH, EC, SAR, and Boron be added to all soil samples.

Requested modifications to the chain of custody were made by Jennifer Pellegrini on 8/12/2024.

Airbill #: N/A

Requirement Description	Yes	No	N/A	Comments (if any)
If samples require cooling, was the temperature between 0°C to ≤ 6°C ⁽¹⁾ ?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Is there ice present (document if blue ice is used)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Are custody seals present on cooler? (if so, document in comments if they are signed and dated, broken or intact)	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
Are custody seals present on each sample container? (if so, document in comments if they are signed and dated, broken or intact)	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
Were all samples received intact ⁽¹⁾ ?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Was adequate sample volume provided ⁽¹⁾ ?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Are short holding time analytes or samples with HTs due within 48 hours present ⁽¹⁾ ?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
Is a chain-of-custody (COC) present and filled out completely ⁽¹⁾ ?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
Does the COC agree with the number and type of sample bottles received ⁽¹⁾ ?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
Do the sample IDs on the bottle labels match the COC ⁽¹⁾ ?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
Is the COC properly relinquished by the client with date and time recorded ⁽¹⁾ ?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
For volatiles in water – is there headspace (> ¼ inch bubble) present? If yes, contact client and note in narrative.	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
Are samples preserved that require preservation and was it checked ⁽¹⁾ ? (note ID of confirmation instrument used in comments) / (preservation is not confirmed for subcontracted analyses in order to insure sample integrity)/pH <2 for samples preserved with HNO ₃ , HCl, H ₂ SO ₄) / (pH >10 for samples preserved with NaAsO ₂ +NaOH, ZnAc+NaOH)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>NC</u>
Additional Comments (if any):				

⁽¹⁾If NO, then contact the client before proceeding with analysis and note date/time and person contacted as well as the corrective action to in the additional comments (above) and the case narrative.

Notes and Definitions

U Sample is Non-Detect.

QR-02 The RPD result exceeded the QC control limits; however, both percent recoveries were acceptable. Sample results for the QC batch were accepted based on percent recoveries and completeness of QC data.

ND Analyte NOT DETECTED at or above the reporting limit

RPD Relative Percent Difference

All soil results are reported at a wet weight basis.

August 23, 2024

Stantec Consulting Services**Chris Roy****2000 S. Colorado Blvd. Suite 2-300****Denver****CO 80222****Project Name - UCRA Remedial Excavation****Project Number - [none]**

Attached are your analytical results for UCRA Remedial Excavation received by Origins Laboratory, Inc. August 16, 2024. This project is associated with Origins project number Y408445-01.

The analytical results in the following report were analyzed under the guidelines of EPA Methods. These methods are identified as follows; "SW" are defined in SW-846, "EPA" are defined in 40CFR part 136 and "SM" are defined in the most current revision of Standard Methods For the Examination of Water and Wastewater.

The analytical results apply specifically to the samples and analyses specified per the attached Chain of Custody. As such, this report shall not be reproduced except in full, without the written approval of Origin's laboratory.

Unless otherwise noted, the analytical results for all soil samples are reported on a wet weight basis. All analytical analyses were performed under NELAP guidelines unless noted by a data qualifier.

Any holding time exceedances, deviations from the method specifications or deviations from Origins Laboratory's Standard Operating Procedures are outlined in the case narrative.

Thank you for selecting Origins for your analytical needs. Please contact us with any questions concerning this report, or if we can help with anything at all.

Sample Receipt Checklist				
Origins Work Order:	4408445			
Checklist Completed by:	JWV			
Date/time completed:	8/19/12			
Matrix(s) Received: (Check all that apply):	<input checked="" type="checkbox"/> Soil/Solid	<input checked="" type="checkbox"/> Water	<input type="checkbox"/> Other:	(Describe)
Cooler Number/Temperature:	1	4 °C	/	°C
Thermometer ID:	7005			
Requirement Description	Yes	No	N/A	Comments (if any)
If samples require cooling, was the temperature between 0°C to ≤ 6°C ⁽¹⁾ ?	/			
Is there ice present (document if blue ice is used)	/			
Are custody seals present on cooler? (If so, document in comments if they are signed and dated, broken or intact)		/		
Are custody seals present on each sample container? (If so, document in comments if they are signed and dated, broken or intact)		/		
Were all samples received intact ⁽¹⁾ ?	/			
Was adequate sample volume provided ⁽¹⁾ ?	/			
Are short holding time analytes or samples with HTs due within 48 hours present ⁽¹⁾ ?		/		
Is a chain-of-custody (COC) present and filled out completely ⁽¹⁾ ?	/			
Does the COC agree with the number and type of sample bottles received ⁽¹⁾ ?	/			
Do the sample IDs on the bottle labels match the COC ⁽¹⁾ ?	/			
Is the COC properly relinquished by the client with date and time recorded ⁽¹⁾ ?	/			
For volatiles in water – is there headspace (> ¼ inch bubble) present? If yes, contact client and note in narrative.		/		
Are samples preserved that require preservation and was it checked ⁽¹⁾ ? (note ID of confirmation instrument used in comments) / (preservation is not confirmed for subcontracted analyses in order to insure sample integrity)/(pH <2 for samples preserved with HNO ₃ , HCl, H ₂ SO ₄) / (pH >10 for samples preserved with NaAsO ₂ +NaOH, ZnAc+NaOH)	/			not checked
Additional Comments (if any):				

⁽¹⁾If NO, then contact the client before proceeding with analysis and note date/time and person contacted as well as the corrective action to in the additional comments (above) and the case narrative.

Notes and Definitions

U Sample is Non-Detect.

QR-02 The RPD result exceeded the QC control limits; however, both percent recoveries were acceptable. Sample results for the QC batch were accepted based on percent recoveries and completeness of QC data.

ND Analyte NOT DETECTED at or above the reporting limit

RPD Relative Percent Difference

All soil results are reported at a wet weight basis.

Project Name - UCRA Remedial Excavation

Project Number - [none]

Attached are your analytical results for UCRA Remedial Excavation received by Origins Laboratory, Inc. August 23, 2024. This project is associated with Origins project number Y408677-01.

The analytical results in the following report were analyzed under the guidelines of EPA Methods. These methods are identified as follows; "SW" are defined in SW-846, "EPA" are defined in 40CFR part 136 and "SM" are defined in the most current revision of Standard Methods For the Examination of Water and Wastewater.

The analytical results apply specifically to the samples and analyses specified per the attached Chain of Custody. As such, this report shall not be reproduced except in full, without the written approval of Origin's laboratory.

Unless otherwise noted, the analytical results for all soil samples are reported on a wet weight basis. All analytical analyses were performed under NELAP guidelines unless noted by a data qualifier.

Any holding time exceedances, deviations from the method specifications or deviations from Origins Laboratory's Standard Operating Procedures are outlined in the case narrative.

Thank you for selecting Origins for your analytical needs. Please contact us with any questions concerning this report, or if we can help with anything at all.

Sample Receipt Checklist

Origins Work Order: UUCR677

Checklist Completed by: JAD
 Date/time completed: 8/23/12

Matrix(s) Received: (Check all that apply) Soil/Solid Water Other: _____
 Cooler Number/Temperature: 1 15.7 °C 1 - °C 1 - °C 1 - °C 1 - °C

Thermometer ID: 7005

Requirement Description	Yes	No	N/A	Comments (if any)
If samples require cooling, was the temperature between 0°C to < 6°C ⁽¹⁾ ?	/			
Is there ice present (document if blue ice is used)?	/			
Are custody seals present on cooler? (If so, document in comments if they are signed and dated, broken or intact)		/		
Are custody seals present on each sample container? (If so, document in comments if they are signed and dated, broken or intact)		/		
Were all samples received intact ⁽¹⁾ ?	/			
Was adequate sample volume provided ⁽¹⁾ ?	/			
Are short holding time analytes or samples with HTs due within 48 hours present ⁽¹⁾ ?		/		
Is a chain-of-custody (COC) present and filled out completely ⁽¹⁾ ?	/			
Does the COC agree with the number and type of sample bottles received ⁽¹⁾ ?	/			
Do the sample IDs on the bottle labels match the COC ⁽¹⁾ ?	/			
Is the GGC properly relinquished by the client with date and time recorded ⁽¹⁾ ?	/			
For volatiles in water – is there headspace (> ½ inch bubble) present? If yes, contact client and note in narrative.		/	EXD	
All samples preserved that require preservation and was it checked ⁽¹⁾ ? (note ID of confirmation instrument used in comments) ⁽²⁾ (preservation is not confirmed for subcontracted analyses in order to insure sample integrity). (pH <2 for samples preserved with HNO ₃ , HCl, H ₂ SO ₄), (pH >10 for samples preserved with Na ₂ SO ₃ +NaOH, ZnAc+NaOH)	/		EXD	NC
Additional Comments (if any):				

⁽¹⁾If NO, then contact the client before proceeding with analysis and note date/time and person contacted as well as the corrective action to in the additional comments (above) and the case narrative.

Notes and Definitions

- U Sample is Non-Detect.
- S-GC Surrogate recovery outside of control limits. The data was accepted based on valid recovery of the remaining surrogate.
- QR-02 The RPD result exceeded the QC control limits; however, both percent recoveries were acceptable. Sample results for the QC batch were accepted based on percent recoveries and completeness of QC data.
- ND Analyte NOT DETECTED at or above the reporting limit
- RPD Relative Percent Difference
- All soil results are reported at a wet weight basis.

Project Name - UCRA Remedial Excavation Project Number - [none]

Attached are your analytical results for UCRA Remedial Excavation received by Origins Laboratory September 09, 2024. This project is associated with Origins project number E409204-01.

The analytical results in the following report were analyzed under the guidelines of EPA Methods. These methods are identified as follows; "SW" are defined in SW-846, "EPA" are defined in 40CFR part 136 and "SM" are defined in the most current revision of Standard Methods For the Examination of Water and Wastewater.

The analytical results apply specifically to the samples and analyses specified per the attached Chain of Custody. As such, this report shall not be reproduced except in full, without the written approval of Origin's laboratory.

Unless otherwise noted, the analytical results for all soil samples are reported on a wet weight basis. All analytical analyses were performed under NELAP guidelines unless noted by a data qualifier.

Any holding time exceedances, deviations from the method specifications or deviations from Origins Laboratory's Standard Operating Procedures are outlined in the case narrative.

Thank you for selecting Origins for your analytical needs. Please contact us with any questions concerning this report, or if we can help with anything at all.

Origins Laboratory F-012207-01-R1
 Sample Receipt Checklist Effective Date: 01/09/12

Origins Work Order: E409204

Checklist Completed by: EHJ KK
 Date/time completed: 9/19/12

Matrix(s) Received: (Check all that apply): ✓ Soil/Solid ✓ Water Other:

Cooler Number/Temperature: 1, 2.2 °C / °C / °C / °C / °C

Thermometer ID: T005

Requirement Description	Yes	No	N/A	Comments (if any)
If samples require cooling, was the temperature between 0°C to ≤ 6°C ⁽¹⁾ ?	/			
Is there ice present (document if blue ice is used)?	/			
Are custody seals present on cooler? (If so, document in comments if they are signed and dated, broken or intact)		/		
Are custody seals present on each sample container? (If so, document in comments if they are signed and dated, broken or intact)		/		
Were all samples received intact ⁽¹⁾ ?	/			
Was adequate sample volume provided ⁽¹⁾ ?	/			
Are short holding time analytes or samples with HTs due within 48 hours present ⁽¹⁾ ?		/		
Is a chain-of-custody (COC) present and filled out completely ⁽¹⁾ ?	/			
Does the COC agree with the number and type of sample bottles received ⁽¹⁾ ?	/			
Do the sample IDs on the bottle labels match the COC?	/			
Is the COC properly relinquished by the client with date and time recorded ⁽¹⁾ ?		/		
For volatiles in water – is there headspace (> ½ inch bubble) present? If yes, contact client and note in narrative.			/	
All samples preserved that require preservation and was it checked ⁽¹⁾ ? (note ID of confirmation instrument used in comments) / (preservation is not confirmed for subcontracted analyses in order to insure sample integrity)(pH < 2 for samples preserved with HNO ₃ , HCl, H ₂ SO ₄ , H ₃ PO ₄ , pH > 12 for samples preserved with NaAsO ₂ NaOH, ZnAc ₂ NaOH).			/	
Additional Comments (if any):				

⁽¹⁾If NO, then contact the client before proceeding with analysis and note date/time and person contacted as well as the corrective action to in the additional comments (above) and the case narrative.

Notes and Definitions

- U Sample is Non-Detect.
- S-GC Surrogate recovery outside of control limits. The data was accepted based on valid recovery of the remaining surrogate.
- QR-02 The RPD result exceeded the QC control limits; however, both percent recoveries were acceptable. Sample results for the QC batch were accepted based on percent recoveries and completeness of QC data.
- QM-07 The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
- ND Analyte NOT DETECTED at or above the reporting limit
- RPD Relative Percent Difference

All soil results are reported on a wet weight basis.

WELLHEAD AND FLOWLINE CLOSURE CHECKLISTS

WILSON CREEK UNIT 2 REM # 29726

Wellhead Closure Checklist COGCC Rule 911.a.(4) Environmental Site Closure Assessment Field Form

Additional attachments (optional):		Pit Closure	Tank Battery Closure	Flowline Closure	Partially Buried Vault Closure
Site Name & COGCC Facility Number: UNIT 2 232399		Date: 9/11/24 + 10/17/24	Remediation Project #: 29726		
Associated Wells: Wilson Creek Unit (MR-SN) #2		Age of Site: ± 60 yrs	Number of Photos Attached: 4		
Location: (GPS coordinates of wellhead or southeastern most wellhead for multiple)		40.196671, -107.928269			Estimated Facility Size (acres): —

General Condition of Site: (General observations regarding housekeeping, corrosion, waste management, etc.)

Surface conditions noted as OK. Chevron noted impacts at time of P+A.

USCS Soil Type: **Oden-Creek-Terry-Burnett-Lams** Estimated Depth to Groundwater: **± 50'**

Hydrocarbon Impacted Soils / Spills: (Note estimated size and if impact appears to be surficial or extends to an unknown depth)

*Initial observations in wellhead excavation bellhole showed hydrocarbon impacts around pad.
No initial sample collected as excavation began immediately.*

Salt Crusted Soils or Impacted Vegetation: (Note estimated size and if impact appears to be surficial or extends to an unknown depth)

No salt deposition noted.

Wellhead(s)

Well API	05-103-01125				
Age	± 60 yrs				
Condition of surface around wellhead	Gravel - Concrete - No Surface Stain				
PID Readings	-				
Condition of subsurface (staining present)	HC odor + Staining				
PID Readings	Max of 3.2 ppm on N-BASE				
Sample taken? Location/Sample ID#	Yes - See Rpt.				
Photo Number(s)	Pgs 1+2				

Other observations regarding wellheads:

N/A

Summary

Was impacted soil identified?	No	Yes - less than 10 cubic yards	Yes - more than 10 cubic yards
Total number of samples field screened:	11	Total number of samples collected:	7
Highest PID Reading:	3.2 ppm - N. BASE	Total number of samples submitted to lab for analysis:	7
If more than 10 cubic yards of impacted soil were observed:			
Vertical extent:	21'	Estimated spill volume:	Unknown - Historical
Lateral extent:	100' x 120' Approx	Volume of soil removed:	2500 cubic Yards
Is additional investigation required?	No		
Was groundwater encountered during the investigation?	No	Yes - not impacted or in contact with impacted soils	Yes - groundwater impacted and/or in contact with impacted soils
Measured depth to groundwater:		Was remedial groundwater removal conducted?	Yes No
Date Groundwater was encountered:		Commencement date of removal:	
Sheen on groundwater?	Yes	No	Volume of groundwater removed prior to sampling:
Free product observed?	Yes	No	Volume of groundwater removed post sampling:
Total number of samples collected:		Total Volume of groundwater removed:	
Total number of samples submitted to lab for analysis:
