Good Morning Steve,

We are currently rigged up on the North Rinn 24-9 (05-123-33896). Yesterday we successfully pumped our stub plug @2600'. Currently we are seeing a small bubble every few minutes with no LEL's. We saw this same thing on a few of the other North Rinn wells we have already plugged and had success pumping a plug across the bottom of the Pierre. I would like to take the same approach here and pump a balance plug from 1150' to 950'. This will leave us ~150' before the surface casing shoe. Let me know if you have any concerns with this plan.

**Thanks,**

**Derek Clark**
