**3** CA# 200357

Corrective Action: Install or repair required BMPs per Rule 1002.f.(2)C

Date: 10/30/2024

Response: CA COMPLETED

Date of Completion: 10/30/2024

Operator Comment: An earthen berm exists around the parameter of the well pad, upgradient of the perimeter diversion ditches, to prevent surface runoff. An additional berm has been installed across the access road on the north side of the well pad to prevent stormwater migration across the access road ingress/egress. Additionally, vac truck operations have removed in excess of 200 bbls of stormwater from the pad surface on 11/15/2024 to assist with preventing surface water migration from the pad surface to the perimeter ditch and berm system. The need for additional stormwater BMPs is being evaluated as part of remediation of the release, including additional BMPs to prevent 'potential' surface flow from leaving the well pad perimeter ditches and migrating toward the on-site detention basin to the east of the well pad and the stormwater outfall on the northwest corner of the well pad. NGL will ensure the proper installations/ repairs are completed for compliance with Rule 1002.f.(2)C.
