CORRECTIVE ACTIONS:

1 CA# 200302

Corrective Action: Submit reports as per Rule 419. Date: 12/20/2024

Response: CA COMPLETED Date of Completion: 11/18/2024

The subject wellbore only has 9-5/8" 36# J-55 surface casing set to a depth of ~1,550'. The surface casing has

Operator Comment: been cemented back to surface with excess cement and has never been drilled out. Therefore, there's no annulus to test for pressure from a deeper-set string of casing set in hydrocarbon-bearing formations and no cause to MIT the wellbore that is isolated surface casing only.

Confluence's Form 5 submittal was confusing because we stated that 'Confluence will comply with all bradenhead and MIT testing requirements during the suspension of operations.' That was an error on our part.

**OPERATOR COMMENT AND SUBMITTAL**

Comment: Please find attached a picture of the subject well's well sign. This had been stored in the well's cellar while offset wells' hydraulic fracturing operations were taking place. Confluence will order a clean, new sign for the subject well.

Please let me know if there are any further questions.

I hereby certify that the statements made in this form are, to the best of my knowledge, true, correct, and complete.
