### INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

A site investigation will be conducted pursuant to COGCC Rule 911 at the RUBIX JOHNSON QC T6N-R64W-S32 L01 Tank Battery location.

### PROPOSED SAMPLING PLAN

#### Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Grab confirmation soil samples were collected from the three (3) produced water vessels excavation, two (2) beneath the ground oil tanks, and at the two (2) separators. Soil samples were analyzed by a certified laboratory for TPH (total volatile [C6-C10] and extractable [C10-C36] hydrocarbons), organic compounds in soil per COGCC Table 915-1, and EC, SAR, pH, and boron. All samples collected were analyzed by a certified laboratory using approved COGCC laboratory analysis methods.

Groundwater was not encountered.

#### Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

### Additional Investigative Actions

☐ Additional alternative investigative actions described in attached Site Investigation Plan ( summary ):

Visual inspection at the tank battery area occurred during abandonment activities. Field personnel field screened all disturbed areas using visual and olfactory senses to determine if laboratory confirmation sampling was required. The COGCC Tank Battery and Produced Water Vessel Closure Checklists were utilized and filled out during the abandonment process. A photolog is attached.

☐ Is further site investigation required?

**REMEDIAL ACTION PLAN**

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? Yes

**SOURCE REMOVAL SUMMARY**

Describe how source is to be removed.

Impacted soil was removed from the QC A 32-19 Tank Battery release area by excavation. The impacted soil was disposed of at an approved landfill as non-hazardous waste in accordance with Rules 905 and 906. Copies of the waste manifests are available upon request.

**REMEDATION SUMMARY**

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Five background samples were collected in native soil, from similar depths and lithologies as the previously collected excavation confirmation samples and analyzed for arsenic (As) and pH. Concentrations of As were cleared by the background sample in four of the five excavation confirmation samples. pH was not cleared by any of the background samples is slightly outside the ECMC Table 915-1 soil suitability range for inorganics. A delineation update report As and pH was attached on Doc.# 403744547.

The Operator is requesting to resample arsenic and pH in their respective exceeding sample locations and at the same depths to confirm the presence of these elevated constituents. Refer to Figure 2 of the attached QC A 32-19 Arsenic and pH Delineation Update for proposed resampling locations.

If elevated concentrations of As and pH are again observed the operator will request to leave elevated inorganics in place using a comprehensive reclamation plan to confirm the assertion that elevated concentrations of pH and As do not pose a threat to future agricultural activities. NFA is expected to be achieved within 90 days of receipt of the reclamation plan.
