INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Pursuant to ECMC Rule 911 a site investigation was conducted pertaining to WEBSTER B06-07 wellhead cut and cap and flowline removal. Approximately 167' of flowline was abandoned in place (ECMC doc#403540450). The wellhead was cut and capped per ECMC rules. Additionally, soil samples were collected at any points of material change and/or hammer unions, as well as at the bell holes on either side of a waterway, AS APPLICABLE to abandonment type.

Pursuant to ECMC Rule 911 a site investigation will be conducted pertaining to the WEBSTER B06-17 wellhead cut and cap and flowline removal. Approximately 145' of flowline will be removed. The ECMC will be updated in a supplemental Form 27 if a portion of the flowline is abandoned in place due to field constraints. The wellhead will be cut and capped per ECMC rules. Additionally, soil samples will be collected at any points of material change and/or hammer unions, directional changes, as well as at the bell holes on either side of the waterway, as applicable to abandonment type.

A site investigation will be conducted pursuant to ECMC Rule 911 at the WEBSTER B-65N64W Tank Battery location. Grab confirmation soil samples will be collected from the produced water vessel(s) excavation, beneath the ground oil tank(s), and at the separator(s).

The WEBSTER B06-17 and WEBSTER B-65N64W Tank Battery data will be provided on a supplemental ECMC Form 27.

Two (2) grab soil sample were collected at the base of the excavation or the area showing the highest degree of impact during field screening activities at the wellhead excavation (1) and at the flowline terminus (1). Samples were analyzed by a certified laboratory for organic compounds in soil per ECMC Table 915-1, and EC, SAR, pH, and boron. All samples collected will be analyzed by a certified laboratory using approved ECMC laboratory analysis methods.
