COMMENTS:

This well has bradenhead pressure that exceeds the Colorado threshold of 5 psi with a required bradenhead plan by 10/14/2024.

The Flagg 6-3's bradenhead test observed the bradenhead pressure bleeding off to no flow in three seconds with the instantaneous ending pressure (BH) equaling zero psi. There was no communication in pressure on the production casing, it maintained 54 psi throughout the test. The gas analysis of the two annuli indicates dissimilar gas:

- Bradenhead:

o Nitrogen - .2124

o CO2 - .048

o Methane – 99.29

o Ethane - .371

o Propane - .0473

- Production Casing:

o Nitrogen - .0167

o CO2 – 7.629

o Methane – 92.103

o Ethane - .245

o Propane - .0052

Due to zero communication between the production annulus and bradenhead, the quick bradenhead bleed down to no flow, and differing gas compositions, the bradenhead pressure seems to be from background gas. Hilcorp requests to continue monitoring the Flagg 6-3 and to work with the ECMC if communication occurs or gas analysis show to be similar.

Monthly pressure data is attached.
