## INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Pursuant to ECMC Rule 911 a site investigation was conducted pertaining to the SATER USX CC19-10 wellhead cut and cap and flowline removal. The wellhead was cut and capped per ECMC rules. Approximately 1101' of flowline was removed (Form 44 document # 403537200 in process). Flowline closure data will be included on a Supplemental Form 27.

One (1) grab soil sample was collected at the wellhead excavation. One (1) grab soil sample was collected at the flowline terminus at the separator during the facility decommissioning assessment and was reported under Rem. # 26899 (Form 27 Document Number 403498915). Soil samples were analyzed by a certified laboratory for TPH (total volatile [C6-C10] and extractable [C10-C36] hydrocarbons), organic compounds in soil per ECMC Table 915-1, EC, SAR, pH, and boron. All samples collected were analyzed by a certified laboratory using approved ECMC laboratory analysis methods. Flowline closure data will be discussed on a Supplemental Form 27.

On 5/19/25 one wellhead confirmation sample and four flowline confirmation samples were collected and submitted for full table 915-1 analysis. Background samples were collected and submitted for ECMC Table 915-1 SSR and metals analysis.

## PROPOSED SAMPLING PLAN

### Actions

☐ Additional alternative investigative actions described in attached Site Investigation Plan ( summary ):

Visual inspection of the wellhead and flowline areas occurred during abandonment activities. Field personnel screened all disturbed areas using visual and olfactory senses to determine if laboratory confirmation sampling is required. A detailed summary of decommissioning activities at the wellhead and flowline risers, including an ECMC Flowline Closure and Wellhead Closure Checklist, site photos, figures, and laboratory analytical results, were attached to Supplemental Form 27 # 403728009.
